EDUCATION

ETH Zurich

Sep 2024 - Aug 2026

Master Data Science - Interdisciplinary focus on Finance

Relevant Coursework: Natural Language Processing, Large Language Model, Probabilistic Artificial Intelligence, Computational Statistics, Time Series Analysis, Big Data, Quantitative Risk Management

École Polytechnique

Sep 2021 - May 2024

Bachelor of Science - Mathematics and Computer Science Double Major - GPA: 4.0/4.3

PUBLICATIONS

First Author, EMNLP 2025 Main Conference

ETH Zurich

Feb 2025 - Aug 2025

Objective: Design a metric (Targeted Persuasion Score) to measure the power of a context in shifting LLM toward a target answer

- Determine desirable traits, formulate the metric and adapt it to different answer spaces with Wasserstein distance
- Test behavior of the metric with different LLM families (Qwen, Llama, and Gemma)
- Measure how persuasive different combination of review's concatenation are in changing LLM's rating of a movie with IMDB dataset
- Apply the metric to computational social science annotation tasks, evaluating LLMs' alignment with expert-coded political texts under different prompting strategies

EXPERIENCES

Teaching Assistant - Natural Language Processing Fall 2025

ETH Zurich

Sep 2025 - Jan 2026

- Give graduate-level tutorial sessions on semantic parsing and axes of modeling in NLP.
- Design and grade assignments.
- Provide office hour to help students with course's materials and exercises.

Detect AI-generated text - Bachelor Thesis

Université Sorbonne Paris Nord

Jan 2024 - Mar 2024

Objective: Detect AI-generated content and boundaries via lexical and statistical features

- Use BERT models and its variants (RoBERTa, DistilBERT) to classify generated text
- Use Tf-Idf statistics of texts to build a classification model
- Test correlation between divergence of distribution of text versus model's performance
- Detect boundary of a hybrid text using classification models

Open Information Extraction With Entity Focused Constraint

INRIA Research Center

June 2023 - Aug 2023

Objective: Extract relations among name entities in public medical papers

- Extract triples of the form (Subject, Verb, Object) by implementing the ReVerb algorithm and using the pre-trained OIE model
- Extract general information from papers using web scraping techniques
- Analyze extracted predicates using several clustering algorithms and evaluation criteria.

PROJECTS

BBQ Food promotion extraction

World Wide Fund for Nature

Oct 2024 - Dec 2024

Objective: Automating the extraction process of BBQ products from big supermarkets in Switzerland

- Preprocess and analyze ground truth dataset and extract data from LLMs using Python and Excel
- Recognize matching product name using word embedding from pretrained LLM models and cosine similarity
- Test the accuracy of LLMs' extraction based on ground truth dataset

Football Player Analysis

Team leader

Oct 2023 - Dec 2023

Objective: Find players with similar playing styles and suggest possible transfers

- Collect statistics of football players in the top 7 European leagues season 2022-2023
- Clean the dataset and select important features for further analysis
- Cluster the players using K-means clustering

AWARDS

AI-JAM US Online Competition, **Gold Medal**

Aug 2020 - Oct 2020

6th Annual International Mathematical Modeling Challenge, **Honorable Mention**

Apr 2020

Hanoi Excellent Students Competition in High School Mathematics, **Absolute Winner**

Sep 2020

Vietnam Northern Region Math Olympiad, **Bronze Medal**

Apr 2019
